

## ICAM and Dalian Machine Tool Group Sign Strategic Marketing Agreement

**Montreal, September 18, 2007** – ICAM Technologies Corporation (ICAM) is pleased to announce that it has entered into a Strategic Marketing Agreement (SMA) with Dalian Machine Tool Group (DMTG), China's largest machine tool builder. The main purpose of this agreement is to assure the accurate integration of ICAM's NC post-processing and machine tool simulation solution with advanced Dalian machine tools.

This business relationship provides ICAM access to DMTG's commercially available machine tools and controls and their design specifications. The sharing of technical knowledge and other resources will allow for a successful integration of ICAM and DMTG's respective products and services ultimately enabling end-users to benefit from sophisticated DMTG machine tool features via their respective CAD / CAM / PLM systems.

DMTG and ICAM will also collaborate on strategic marketing initiatives, as well as promote each other's products and services in the NC manufacturing industry.

This newly formed relationship enables DMTG customers to benefit from ICAM's 35 years of NC post-processing experience with advanced multi-axis machining applications and techniques such as high-speed machining, tool-tip programming, coordinate frame transformations, NURBS interpolation and arc fitting of point-to-point data.

Additionally, deploying Virtual Machine as a harmonized productivity tool to ICAM's NC post-processing technology delivers a powerful machine tool simulation environment enabling NC programmers to optimize and test programs against collisions and over-travel automatically during post-processing.

"We are proud to support the efforts of Dalian to penetrate the 5-axes market in China," said Sam Chehab, ICAM's Vice President of Sales and Marketing. "With this newly formed business relationship, end-users particularly within the aerospace and automotive industries will have easier access to Dalian's advanced machine tool features using ICAM's advanced solutions concurrently with their CAD / CAM / PLM systems."

For individuals interested to view product demonstrations, ICAM will be exhibiting at EMO 2007 in Hanover, Germany at Stand F12, Hall 6.

“The Chinese machine tool market is growing rapidly and we plan to diversify our product line to include state-of-the-art 5-axes machines primarily targeted to the aerospace and automotive industries,” said Baoqing Zhou, Chief Engineer at Dalian. “ICAM has been the leading supplier of advanced NC manufacturing software products worldwide for over 35 years and we are confident that our customers will now benefit from an integrated NC post-processing and machine tool simulation solutions allowing them to capitalize on Dalian machine tool investments.”

### **About ICAM Technologies Corporation**

For over 35 years ICAM Technologies Corporation has been specializing in the development and implementation of advanced NC post-processing solutions for manufacturers in major industries around the world. In 2002, ICAM has added an integrated machine tool simulator, Virtual Machine<sup>®</sup>, to its product mix that further strengthened its position in the NC manufacturing market. ICAM customers benefit from dramatic improvements to CNC machine optimization, NC programmer productivity and manufacturing process efficiency. ICAM's unique technology and services provide its customers and industry partners with the competitive edge that their business operations and customers demand.

### **About Dalian Machine Tool Group**

DMTG's core business is machine tools. Over recent years, DMTG has broadened its manufacturing base by including auto parts, microelectronics and foreign trade. DMTG has 22 effective subsidiaries, joint ventures and cooperation with world famous partners from USA, Germany, Japan, Korea, Switzerland and Israel. From 2000 to 2006, Dalian has been the largest company in sales revenue of machine tools in China. DMTG also became the only machine tool company that entered the top 500 enterprises ranking of China in 2003.
